STEP 1:

open page helloJsp.jsp

STEP 2:

create a database with the name exercise

create a table login_details which has columns namely: username and password both of varchar type.

login_details :

username password

payal   pass

abc   newpass

pqr   new

admin   admin

now create a table user1 which has columns blog_id of int type and content of varchar type.

STEP 3:

enter the credentials i.e username and password.

login_details table has some stored username and corresponding password of the registered users.

It will validate from the database and upon successful validation user will be redirected to welcome.jsp and

upon unsuccessful validation it will be redirected to invalid.jsp

STEP 4:

In welcome.jsp user will be asked to enter blog_id and blog_content and upon clicking the save button it will be stored in the database in the table user1.

Upon successful submition message will be dispplayed and in case of unsuccessful submition error message will be displayed.

Question codes:

1. PageServlet.java (for validating username and password from the database with the one enter by the user in helloJsp.jsp)

2. HelloForm.java (for entering blog id and content into the database in welcome.jsp)

helloJsp.jsp – takes input of user credentials

welcome.jsp – takes input of blog content and id

invalid.jsp – displays error message upon unsuccessful submition
